Local Resident Suffers Nervous Break Down

On Friday evening last considerable excitement ensued when Mr. Art. Heywood, a local resident of many years, decided to go "gunning" so with a 30-30 rifle, he started on foot about 9 p.m. for the East Community Hall where a dance was in progress and where he expected to find the "object of his search".

Corporal Cameron was notified and shortly after nine o'clock, after looking around the town for Mr. Heywood, he started East in his car accompanied by Arnold High. They overtook Mr. Heywood on the East side of Hall's local and getting out of the car, tried to persuade Mr. Heywood to return to town. Mr. Heywood said he was after a "certain party" and meant business. Mr. Heywood fired a shot. Corporal Cameron then dodged and drew his gun and was about to shoot when Mr. Heywood fired second shot. Corporal Cameron and Arnold High decided that things were plenty warm so started back to town leaving the car on the road with the lights on and the engine running.

Arriving in town Corporal Cameron phoned Calgary for re-inforcements and then sent word to those in charge of the dance to be on the look out. A few men took charge of arrangements and after instructing the dancers to stay away from the windows, they awaited the arrival of Mr. Heywood. As he entered the outside door of the hall at approximately 11:30 o'clock, they seized the gun and in the struggle the gun was discharged, going through the roof of the ante-room. Mr. Heywood was subdued with out any further harm being done, and a message dispatched for Corporal Cameron to come and relieve them of their charge, and he arrived around 1:00 a.m. Mr. Heywood was taken back to town, appeared before Magistrate A.W. Gordon on Saturday morning and was remanded until Saturday November 23rd. He was then taken to Calgary.

Mr. Heywood had been worrying a lot of late over different matters, and it is thought his nerves got the best of him. It is unfortunate that this should have happened to Mr. Heywood, who is usually of a quiet nature, especially when he is more or less an innocent victim of "circumstances".

All those assisting at the hall deserve great credit for the most efficient way they handled a very unpleasant task.

Wedding Fleming—Luft

The home of Mr. and Mrs. S. G. Fleming was the scene of a quiet wedding on Saturday November 16, when Miss Pauline Luft of Airdrie was united in marriage to their second son, Rowland Samuel. The bride entered the room on the arm of her father, Mr. George Luft, to the strains of Lohengren's Wedding March, and was attended by Miss Clara Lust of Calgary, and Donald Fleming acted as groomsmen.

The wedding was solemnized by Rev. E. Longmire of the United Church, in the presence of relatives and intimate friends from Crossfield, Airdrie and Calgary, after which a wedding dinner was served, covers being laid for twenty-eight.

Board of Trade Notes

Congratulations to our 2nd. Vice President in winning the Nor' West Farmer—Master Farmer gold medal and certificate.

We cannot give the date in this issue but arrangements are being made to entertain the Drumhead Board of Trade, to offset the date earlier in the month which was cancelled owing to the severe weather and bad roads.

Publicity leads to Prosperity and this is one of the goals that our Local Board is aiming for.

Masons Celebrate Birthday

The Crossfield Masons on Tuesday evening celebrated the 25th anniversary of the institution of Crossfield Lodge, which was instituted on April 8th, 1910.

M.W. Bro. J.T. MacDonald of Calgary, who is Grand Master of Alberta instituted Crossfield Lodge during his term of office, was present and gave a most inspiring address on the early history of Masonry and how it made its debut into western Canada and Alberta.

M.W. Bro. S.J. Blair, who, as D.D. G.M. of District No 1 accompanied Bro. MacDonald on his first trip, again accompanied him last Tuesday and spoke of the many changes that have taken place during that time.

Three Calgary Lodges and Carstairs Lodge were also special guests of the evening.

A brief outline of Masonic progress in Crossfield was given during the evening.

The condition of the roads kept many away but the hundred or more that were present report a most enjoyable evening.

Treaty May Benefit West

The new reciprocal tariff arrangements, which Prime Minister W.L. McKenzie King and President F.D. Roosevelt recently signed, and which were announced Sunday by both Governments, has many apparent advantages to Western Agriculture. With a reduction in the export duty on many farm products but particularly livestock, and with a substantial reduction in the import duty on farm machinery and repairs, it looks as if it will be of considerable advantage.

It is true that Canada has had to make concessions to the United States, which was to be expected, but we sincerely hope, that, in the actual working out of these concessions, we are not left indirectly in about the same position as we are today.

Premier King deserves credit for his prompt action in this matter. It was also very sportsman like for him to give credit to the Bennett Government for the spade work done by them, which no doubt facilitated to a great degree the prompt action of Premier King.

Council Makes Improvements

The Village Council are to be congratulated in having the fence completed around the rink and other necessary improvements which now gives the appearance to anyone passing by or living in that part of the Village, that Crossfield has been more than just holding its own during the depression.

It was good business when the Council moved the rink from the old site to its present location. They are to be further commended in undertaking to run the rink this winter, instead of leasing it as in previous years. It shows that they have the interest of the community at heart and it is their wish that everyone, especially the children, will have their full share of skating this coming season.

The Council have been to considerable expense in building the rink without increasing the taxes of the Village. It is now the duty of the citizens to support the Council in this new enterprise and show they appreciate the work carried out by the board in the interests of the whole community.

BIRTHS

Born—on November 15th, to Mr. and Mrs. Pat Kelliv, a son, at the Collins Nursing Home.

Born—at the General Hospital Calgary to Mr. and Mrs. Hobart Alra on Wed. Nov. 20, a son.

Born—on Wednesday Nov. 20th to Mr. and Mrs. I.W. Fike at Maden, a daughter.

Difficult Problems

The problems which it may be expected will be discussed at the pending conference between representatives of the Federal government and members of the Canadian provinces will furnish plenty of material for conversations and negotiations.

If only one half of the difficulties which the western provinces have recently experienced and still are experiencing in finding sufficient revenue to maintain their ordinary services, to saying nothing of contributing substantially towards the cost of relief, can be removed a forward step will have been taken, and representatives of the provinces will leave Ottawa with something a little more tangible than hope for speedy recovery and for future progress.

One of the factors in the present situation that will have to be faced squarely is the fact that the cost of government is pressing heavily on the taxpayers, that there is just so much money available for the upkeep of services and that a shifting of burdens from one unit to another is not the way out of the trouble, though it may be a temporary palliative.

If several buckets are dipping water out of a well which is not being replenished from natural sources it is only a question of time when the well will run dry, and in the long run it does not make very much difference which of the buckets took most of the water out of the well.

That is actually the position of the taxpayer in western Canada. There are three buckets drawing on his resources, the federal, the provincial and the municipal, the last-mentioned, of course, including the schools.

The permanent solution of the difficulty lies not so much in a decision as to who is to be allowed to draw the most, or the least, water from the well but how the well is to be replenished, and until this can be determined, those in authority will have to address themselves to the task of finding ways and means of conserving the presently available supply and making the utmost of it.

There are many ways in which a conservation policy might be put into effect and one of the most practicable would be to eliminate a good deal of duplication and overlapping of services which have grown up, apparently without any blame attachable to any one in particular for the situation.

There are, for example, services which are being provided by both federal and provincial governments resulting in double costs for machinery and operation, in addition to a degree of confusion and ineffectiveness attendant upon two unrelated organizations trying to reach the same good by different roads.

In this category might be included debt adjustment machinery and to some extent agricultural services rendered by both federal and provincial administrations. These are only cited as illustrations of a number of fields of endeavor in which co-ordination of effort by a merger of duplicated services would not only bring about greater efficiency but would also save considerable expense to the taxpayers.

It is true that in connection with these and other activities in the same category objection might be raised that dual services are essential because of the limitations of legislative competence, but if that is the sole barrier in the way of economy, then necessary legislative authority to dissipate the difficulty should be sought and doubtless could be secured if a spirit of true co-operation on the part of all concerned is evinced.

In the matter of sources of revenue also there is duplication which should be eliminated by a better defined allocation of spheres of taxation as between the several governing units. There should not, for instance, be two income taxes with two sets of costly machinery to gather the same type of tax from the same taxpayers, necessitating a double expenditure.

In pre-war and post-war depression years the fields of taxation were fairly well defined and understood and governments, in those days, confined their revenue collection efforts within well defined channels. First departures from recognized practice and prerogative came with the emergency demands of the war and subsequently, as financial and economic stringency became more severe, governments were loath to abandon what they had gained.

On the contrary, the practice of encroaching on one another's sources of income assumed serious proportions as the level of the water in the well declined and the demand for more and more water grew with greater intensity.

With this situation confronting them, the participants in the conference will face a difficult task. While, no doubt, many suggested methods for replenishing depleted incomes will be offered, first thought probably will be given to conservation of the existing resources, and one of the most practicable means of doing this will be to stretch the tax dollar by eliminating duplication. This can be done, not only without impairing the services involved but should result in improving them and at a lesser cost.

Built Himself A House

Russian In Montreal Found He Had Broken Law

Cold weather was coming on and Uncane Vinchuk, 50, had no place to sleep. So Uncane, a native of Russia, picked himself out a spot on the side of Mount Royal in Montreal, cut all the wood he needed from the trees on the mountain, and built himself a nice comfortable shack to spend the winter. Everything was going fine until two husky police constables hurried Vinchuk off to court on a charge of desecrating the park. Recorder F. Sample allowed him to go on condition he demolish the structure.

Finds Blindness No Handicap

War Veteran Has Developed Memory To Remarkable Extent

Captain Gerald Lowry, a blinded veteran of the World War, recently was one of the champion pair at the British Bridge League Congress at Harrogate, England. His partner was a woman. Not only did they win but they were always the first pair to finish their hands.

Blindness has its compensations. Nature to some extent redresses the balance by developing other faculties. Captain Lowry is a remarkable example of overcoming the handicap and lives a more active and normal life than most people. He has developed his memory to such an extent that when a friend whispers the designations of his cards to him he remembers them throughout the game and where he has arranged them. When he has to play dummy, the cards are named to him and he remembers them, too. The rest is easy. During the Harrogate tournament he played 32 calls and never forgot a card.

Captain Lowry before the war was an ardent golfer and amateur boxer. He still plays golf and boxes. He tests his own ball and drives by instinct. His caddy tells him where his ball lies and where he should hit it, and he never misses. He also learned osteopathy and has built up one of the most lucrative practices in London. — St. Thomas Times-Journal.

Began In Ice Age

Scientists Believe Recent 'Quake' Originated 25,000 Years Ago

Persons whose sleep was interrupted by the recent earthquake may blame it on the great Ice Age.

It is at least 25,000 years since the Ice Age ended, scientists estimate, but it was these same scientists who fixed its guilt.

Dr. L. C. Conant, director of the Cornell University geological station, explained the general theory of earthquakes in the northeast is the earth is gradually recovering from the burden of a sheet of ice one to two miles thick.

"The melting of this tremendous glacier," he said, "took a tremendous pressure off the earth's crust. Every once in a while the earth stretches back a bit, moving just a trifle upward and northward. As a matter of fact, our instruments indicated there was a slight tilt to the north."

Science Tackles Lipstick

Produce Miracles With The Aid Of Delicate Scales And Chemical Reactions

As the result of exhaustive laboratory experiment, chemists have succeeded in reducing lipstick manufacture to an exact science. The relation of the temperature of the lips, the degree of moisture and the influence of fats are now expressed in scientific equations.

The bloom of human lips, long celebrated in song and story, has been accurately measured with the aid of delicate scales and chemical reactions. The new scientific lipsticks produced in German laboratories and recently demonstrated at the Leipzig fair, are said to be contact proof, moisture resisting and to assure a uniform appeal for days on end.

Bigger Braille Library

Books Are Larger And More Space Is Required

The rebuilding of part of the National Library for the Blind, in Great Smith-street and Tufnell-street, Westminster, England, which has now been completed, provides extended accommodation for about 250,000 Braille volumes, together with up-to-date facilities for receiving and despatching books and music on loan to blind readers in the British Isles.

Considerable storage space is required in a library of this kind, as an average Braille volume measures 14 inches by 11 inches, and weighs five pounds.

The number of volumes circulated averages 1,200 per day.—Overseas Daily Mail.

Cannot Get Italian Marble

League of Nations' sanctions against Italy have created an unusual situation in connection with the new League palace which was scheduled to be occupied in November. Most of the Rose marble used in construction of the palace comes from Italy, and much of it is still due to arrive. League sanctions prohibit the reception of goods under existing contract, so the League must look for its marble elsewhere.

Charwoman (to neighbor with whom she is having a spat)—What I say is, there is ladies' an' ladies—an you ain't neither. 2125

Reform In Examinations

President Of University Of Alberta Would Make Entrance Less Rigid

Entrance examinations to the University of Alberta were in the process of being made less rigid and formal, Dr. R. G. Wallace, president of the university, told 200 southern Alberta high school teachers in an address. He called the final examinations "the bugbear of Alberta teachers."

Reform in examinations would be directed towards leaving the teachers free to express themselves individually and then giving some fundamental, broad test to students matriculating from high school to university, Dr. Wallace said.

"We are trying to achieve the aim at the university that every examination paper set shall have one or two questions which cannot possibly be answered by memorizing notes," he continued.

The university president read as an example of the type of examination he was proposing a set of four examinations presented by Alberta University authorities to determine a scholarship winner last year. They included general examinations to test knowledge in the fields of English, history, science and mathematics, having none of the formal type of examination questions.

Expression of the teachers' personality must be made easier, Dr. Wallace declared, and lessening of the strict examination rules would be the most effective method of accomplishing this end.

All types of political and social theories should be taught in school, Dr. Wallace asserted, but teachers should keep their own personal bias on such subjects in the background.

Would Conserve Game Birds

Visitor To Alberta Advocates Hunting With Hawks

Alberta offers an ideal place for the ancient and honorable art of falconry—the hunting of game birds with hawks—according to Capt. Luff Meredith, of New York.

First man to fly falcons in Alberta, Capt. Meredith was in Calgary after a visit to the Rosebud district, where he flew five birds—one an Alberta goshawk. He did not hunt game birds with his hawks, but flew them loose after pigeons.

The falconer advocates his chosen sport as a means of conserving game birds, at the same time aiding in the extermination of birds of prey such as crows and magpies.

"I believe the sport would be a great conservator of game birds in the west," he declared. "Unlike shooting, an entire party can share in the thrills of hawking."

If hawks were used generally instead of guns, the death rate among game birds would be cut to about one-tenth, he made.

Would Make Effort

Frederick the Great was very proud of his tall grenadiers. One day, says the Christian Science Monitor, when he was reviewing them, he was accompanied by Sir Robert Sutton, who he asked if he thought an equal number of Englishmen could beat them. "Sir, I do not venture to assert that," replied Sir Robert, "but I know that half the number would try."

Case Is Unique

John Timko of New Toronto went to work at a factory with a clear conscience recently—he paid back \$124.40 relief money he received in 1934 when he was sick and out of work. Relief officials said it was the first case of its kind in the history of the town.

Japan will spend more than \$34,000,000 to aid civil aviation in the next few years, the money to be used for extension of air mail services, training of pilots and improvement of flying facilities.

Lithium, potassium, and sodium, the three lightest known metals, will float on water.

BACKACHE

IF you have backache, dizziness, headaches, do not neglect your kidneys. Take GIN PILLS for prompt relief at the first sign of these symptoms. You will feel better, look better—be better, if your kidneys are functioning properly.

Cattle Exports To U.S.

117,000 Head Shipped From Canada For First Ten Months

Approximately 100,000 head of beef cattle have been exported from Canada to United States in the first 10 months of this year. Figures to the end of October reveal 117,000 head have gone over and it is estimated that 17,000 were calves. U.S. tariff on live cattle is three cents a pound when the animal is over 700 pounds and 2½ cents when below that weight. So a 1,100-pound steer would meet a customs duty of \$33.

The year has witnessed an entire reversal in the export trade in Canadian cattle. Last year nearly all Canadian cattle exports for the first 10 months went to the United Kingdom. The total shipments were 46,000. For the corresponding period this year they were 6,500 whereas the shipments to United States jumped from 4,700 cattle and calves last year to 117,000 this year.

The reason for the shift was the shortage of beef cattle in the United States and relatively lower prices in United Kingdom market.

1935 Tobacco Crop Valued At \$8,000,000

Fine-Cured Tobacco Industry In Ontario Rises From One-Sixteenth To One-Fifth

It looks as if the \$8,000,000 valuation put upon the Ontario fine-cured tobacco crop by the experts will be exceeded by the value of the actual purchasing made by Canadian and British manufacturers within the past few days. It is estimated a few years since tobacco-growing in Canada was practically limited to a few farmers raising it for personal use or for a limited local market. Now approximately 30,000 acres of the best soil in Southern Ontario are almost exclusively devoted to the growing of tobacco leaf in a scientific way. This year's crop amounting to 35,000,000 pounds, and having a selling-value \$5,000,000 in excess of the 1934 return of 185,000,000 pounds of cigarettes and other tobacco products Canada incorporate Canadian tobacco in large and increasing quantities, where, hitherto, American and other tobaccos had been used, while the Canadian leaf also has an excellent market in Great Britain in competition with foreign leaf.

The Imperial Tobacco Company of Canada, Limited, which buys a great part of the Canadian crop, has had much to do with the great strides taken by the tobacco-growing districts because it has had a policy for years trying to encourage domestic production. First, however, it was necessary to gradually teach growers and how to grow in order to meet public tastes long accustomed to foreign leaf. The company, at its own expense, has employed a number of experts, brought in the necessary plants for experimentation, made its own chemical and other researches of the soil, of moisture, and other conditions contributory to the best grades of tobacco, taught the grower on his own land by introducing experimental plots, and in other ways interested him in improving and enlarging his crop for the use of the domestic market. It also illustrated to him the precise processes by which the domestic market might be developed in a profitable way. This, and the researches of government experts, combined largely to produce the present condition, and to the great expansion and unmarketable crop, a large and marketable crop, valued at more than \$8,000,000 a year.

The official edict has gone forth that the new styles for the ultra fashionable grower will not embrace any wasteful waste. There will, though, be a sting in the price.

The Newest Inventions

Many Queer Things Shown At Exhibition In London

Among the things displayed at the international Exhibition of Inventions at London were:

A hair-cutting apparatus with rubber protections which permits milady to sleep while her hair is being "set." A double-breasted toasting fork which makes two pieces of toast where only one was made before.

A powder compact combined with a bangle to be worn like a wrist watch.

An attachment for a train or automobile window which improves the view of the passing scenery.

A protector for a trunk or suitcase during travelling. It bites a strange hand.

A "mechanical artist" takes photographs and then automatically chisels out a complete bust in stone in a short period.

London's Debt To Thames

City Is In Real Sense Founded On

Its growth into the largest city of the country and of the world is owed by London to many historical accidents and to one very important fact—its geographical position. The seat of government might have been elsewhere and London might have had to share its political ascendancy with Winchester or New York. But it was almost inevitable that a large trading community should be established around the lowest bridge on the Thames, which flows into the narrow seas heading to the Continent and to the world. The Thames is the root cause for London's existence, and the city is in a very real sense founded upon ships.—P.L.A. Monthly.

Must Be The Climate

A report from Fort Erie, Ont., of a lemon nine inches in circumference growing on a plant in a home there is a "small potato story," Mrs. J. D. Gillock of Calgary, claims. She said she has a lemon tree that last year produced a lemon 17½ inches in circumference from which she made two pies and two glasses of lemonade. At present there is on the tree a green lemon, still growing, which measures 11½ inches in circumference.

A United States government scientist has advanced a theory that explosions in city sewers are caused, not by sewer gas, but by exhaust gas from automobiles, which is heavy and sinks into sewers.

THE CHORE GIRL

All Copper Pot Cleaner

Safe, efficient, will not rust nor splinter. Acts like lightning removing burnt-on food, etc. from Pots and Pans—just use lady's hand and let her do the work.

Scientists Claim Islands On Atlantic Coast Are Being Slowly Washed Away

Prince Edward Island and the Magdalen Islands are being steadily washed away by the sea, according to an expert government hydrographer who has just completed a survey of their coastlines. Soft red soil of these Gulf of St. Lawrence islands, without the protection of solid rock formation, he said, means they fall easy prey to the unceasing motion of angry waves. In two places Prince Edward Island has been nearly cut in two.

"But islanders need not worry," the expert, H. L. Leadman, Ottawa, commander of the hydrographic survey ship Cartier, reassured us. "Mother Nature acts slowly and terra firma is guaranteed the populace for many generations to come."

Then with a laugh he added: "We'll probably all be washed away before these islands disappear. The process is so slow."

Of course there were points that were disappearing faster than others. "The Magdalen Islands are changing continuously. Their Old Harry Head on Coffin Island that is falling away at the rate of 20 to 30 feet a year. The soft red sandstone is just disappearing for the cliff drops sharply down to two fathoms and there's no sign of where the soil goes."

Prince Edward Island was a scant two miles of being cut in two by the Hillsboro river and the inlet on the north side. But the wearing away process had ceased up here and nature had defeated its own purpose by building up sandbar protection against its forces.

The Cartier has been employed since 1910 in surveying Maritime provinces and Gulf of St. Lawrence waters. It has just been laid up for the winter at Charlottetown after sounding an area of 12,600 square miles bounded by the northern tip of Cape Breton Island, Newfoundland, Anticosti and Prince Edward islands.

The ever changing coastline makes constant vigilance necessary in order to preserve the safety of sea-lanes. The Cartier is a quasi policeman searching for upstarts of rock, arch-enemy of liners.

In the chart-room this 700-ton government survey ship is the magic eye that penetrates fathoms and automatically takes photographs of the ocean bottom.

"That machine," said Commander Leadman as he pointed to an intricate arrangement in the corner of the chart-room, "is the most modern type of echo sounding. It sends out a photograph of a picture of the bottom by a system of sound vibration."

Then he unrolled several feet of pictures that showed the bottom of the sea. They were taken off St. Paul's Island at the northern tip of Cape Breton.

"See those vague objects above the ocean floor?" he asked, pointing to his iodine-coloured graph. "They are schools of fish which inadvertently got photographed. You see when schools of fish are dense enough they too return sound waves that are recorded by the sensitive apparatus."

Balms density and low temperatures sometimes made the machine inaccurate when the experts had to recalculate the actual depth of water. In the Gulf of St. Lawrence, 200 fathoms down, the water was below freezing, registering minus two and minus three degrees centigrade.

The Cartier's work was mostly a task of filling in the gaps in British admiralty charts, plotted as early as 1812, Commander Leadman explained. Once in a while they ran across dangerous shoals. Off Cape Whittle on the Labrador shore, adjacent to the shipping lane, they had located a threatening rock 30 feet from the surface.

In surveying the coastline, aerial photography was done first, then with it as a guide, the Cartier began her submarine photography. It was a far cry from the days of the early sounding of the gulf by the admiralty with their crude apparatus to the ocean-floor photography of to-day, the government expert remarked, but the admiralty's small scale charts are surprisingly accurate," he added.

The Calf Club Show of the Dominionwide Boys and Girls' Farm Clubs at the Sherbrooke Winter Fair held recently was the largest assembly of its kind at a provincial exhibition. Two hundred and twelve Calf Club members from every district of the province of Quebec took part in showing 160 calves and yearlings in the different judging contests for selecting teams to go to the Royal Winter Fair, Toronto.

Antelope Herds Increase

Ranchers Claim That They Are Becoming A Nuisance

Harassed by ever-increasing herds of antelope, foot-footed roamers of the foothill country, southern Alberta ranchers are wondering what could be done to save their pastures for cattle and sheep.

The animals, once threatened with extinction, were protected with conservation measures and have multiplied so rapidly an open season was declared this year but Royal Canadian Mounted Police reported no applications for the special license to hunt them have been received.

The license, costing \$5, allows hunters to bag two of the antelope. Cattlemen complain the antelope are eating grass needed for cattle and sheep, besides attacking hay stacks.

One Wild Horse, Allan, a rancher said it costs him the wages and keep of a man and the keep of three hounds in his efforts to drive the animals from his land where they eat his alfalfa, break into his hay stacks and steal the pasture of his cattle herds.

Near Wild Horse, in southeastern Alberta, a herd of 1,000 antelope was reported, while other large herds were seen within a mile of Cochrane, a mining town eight miles west of Lethbridge.

Had not conservation measures been taken, it is doubtful whether any of these antelope—would have survived. Protected in 1914 and 1915 by establishment of sanctuaries in Wawassee and Nemacum national parks and rigid defence of the few herds which roamed the short-grass country in southeastern Alberta, their numbers have increased to thousands.

Flesh of the animals is very delectable, which accounted for the protective measures taken. Indians were killing them wholesale before game officials stepped in.

Hunters, however, are prevented by the short open season—Nov. 1 to 11—and the bag limit of two, from giving any material assistance to ranchers.

Problem For Hostess

Mastery Stroke Of Housewifery Met Difficult Situation

Suppose you were the wife of the governor of Massachusetts, suddenly called upon to serve dinner to a French admiral and 200 officers. You had invited the admiral, but never guessed he would ask to bring all his men with him. Where would you get quick supplies for the banquet, let alone fresh milk for so much home cooking? asks a writer in the Boston Transcript. Nowadays the task would be simple, with orders promptly given by telephone. But Mrs. John Hancock, wife of the Bay State's first governor, faced a serious crisis. In the Boston of her day, a reliable historian tells us, it was flattery "impossible to secure in legitimate ways milk enough for such a multitude at short notice. So, Mrs. Hancock dispatched her servants to the Common with direction to milk all the cows grazing there and to send to her any person who complained. The owners were rather amused than offended by this mastery stroke of housewifery, and no one is known to have protested.

Made Good Impression

The young man waited patiently while the girl at the cashier's desk looked carefully at the new \$10 bill he had just handed her. She turned it over a couple of times, held it up to the light, felt it with her fingertips and then almost reluctantly rang up her cash register and counted out the change.

"Would you know a bad one if you saw it?" the young man asked.

Outraged surprise flitted across her face and then suddenly she grinned and shook her head.

"I don't think so," she said, confidentially, "but the boss was looking and it makes a good impression on him."

Reached New Record

Immigration into Palestine reached a new record in the history of the country with the immigration of 52,000 Jews during the first ten months of 1935. This is an increase of 10,000 Jewish immigrants over the total number for 1934.

The mushroom is very sensitive to changes of temperature and to moisture.

CANADA HONOURS FAMOUS ADMIRAL'S FEAT

Trafalgar Day, the anniversary of Nelson's great victory over the French navy at Trafalgar, is commemorated each year in the Mother Country by the decorating of the famous Nelson's Column in London. Here we see the Hon. G. H. Ferguson, and Mrs. Ferguson, after they had placed Canada's wreath at the foot of the Column.

Dairy Industry Of Canada

Official Of National Council Sees Big Export In Future

Appeal for "close and intelligent consideration to the betterment of Canadian agriculture" was made by Allan C. Fraser, secretary manager of the National Dairy Council of Canada.

Speaking at a Canadian Club luncheon in Montreal, Mr. Fraser reviewed what he called "the romance of Canadian dairying" and described the industry as part of the life-blood of the nation.

History of the dairying industry was traced by Mr. Fraser from its first stages in Asia, 2,000 years before Christ to the present day when in Canada alone there were 3,500,000 milking cows "operated" by 315,000 farmers. These farmers, he said, received an aggregate of \$200,000,000 per annum for their milk products which he said provided the "elixir" of life.

One of the great troubles in the Canadian industry, however, was the lack of uniformity in production, he said. For instance the provinces of Quebec and Ontario did not produce as much as they consumed yet the prairies, a long way from the eastern markets, produced more than could be used there.

It was such problems with which the industry was confronted, said Mr. Fraser, but with careful and intelligent consideration for these problems he thought "the day is not very far distant when we shall be pretty definitely on an export basis for a considerable proportion of our production."

This, he concluded, would be the final answer to the difficulties outlined.

Shipments of feeder cattle brought from Western to Eastern Canada to be fattened under the Dominion Feeder Policy totalled over 2,000 head for the month of September.

Excessive Road Speed

Highways In Good Condition Are Temptation To Driver

Neither the authorities nor the public can afford to ignore the fact that traffic experts are practically agreed in declaring that speed is the outstanding cause of highway accidents. Automobiles of to-day are capable of making greater speed than ever before. They can be operated so easily over roads that, generally speaking, are in excellent condition that drivers unconsciously hit up their rate of travel to an unsafe speed. However mechanically perfect an automobile may be, it cannot be brought to a stop as quickly when running at 50 miles an hour as at 30. There is no doubt that thousands of accidents happen because motorists who do not consider themselves reckless drivers forget that at any moment they may be confronted by a situation that necessitates a quicker stop than they can possibly make.—Baltimore Sun.

Game Ducks Disappearing

Conservation Methods Must Be More Rigidly Enforced

Six types of game ducks in North America are threatened with extinction unless conservation methods are more rigidly enforced and natural enemies of the ducks are combated, Harry C. Oberholser, senior biologist of the biological survey at Washington, said in Toronto recently. Mr. Oberholser was there for the opening session of American Ornithologists' Union convention.

The shoveller, redhead, canvas back, gadwall, ruddy, and buffer head are fast dying out, he said. Contributing causes to their rapidly approaching extinction were pollution of their feeding grounds by oil waste from ships and manufacturing plants, duck disease and destruction of their eggs by crows.

Make This Doll Elephant Mascot

PATTERN 5461

Even though the circus isn't here, this elephant gets applause. That's certain—whether he's a toy for the baby or a mascot for that young lady who has her favorites in football stars. He's a merry fellow and you'll be merry, too, in making him, for he goes together so easily. Do him in a gay print—do him in velveteen—be his choice in either.

In pattern 5461 you will find a pattern and directions for making an elephant about 10 inches high; material requirements.

To obtain this pattern send 30 cents in stamps or coin (coin preferred) to Household Arts Dept., Winnipeg Newspaper Union, 175 McDermott Ave. W., Winnipeg.

There is no Alice Brooks pattern book published

Responsibility Of Research Workers In Regard To Human Welfare

Whales Attack Boat

Exciting Experience Of Fishermen In The Bay Of Chaleur

A vicious attack by five whales while a ketch, entangled in the anchor cable, threatened to pull their 25-foot boat beneath the surface in the Bay of Chaleur is described by James Daley and two other fishermen of St. John's, N.B.

After the men anchored and threw out a line the boat began jerking from side to side as the bow lowered. The water seethed when five whales, estimated by Daley to measure between 40 and 50 feet in length, came to the surface.

"One after another those fellows began charging the boat, and kept at it for about an hour," he said. "As soon as they got close to us they dived under. Several times I could have touched them with an oar. Quite often their backs just scraped our keel as they went underneath. They were going so fast that when they came up on the other side and turned to come at us again they kicked right over on their sides. Several times their tails came within a foot of smashing the boat. What with their splashing and blowing they pretty near drowned us."

"They were coming closer each time they charged, and I knew that it would only be a matter of time before they would strike the boat. I decided to cut the cable, and we got up to the bow. Right then it was about eight inches above water level."

"We gripped the cable to pull it around the side to get at it to cut it, when we felt something slide off, and the bow came up with a jerk. The five whales charged once or twice more, and then disappeared. It was the toughest spot I was ever in in all my 30 years' fishing."

Chalk As We Know It

Was Made Convenient For School Use By Dr. Field

One hundred years ago school chalk as we know it, was invented. The man who brought this priceless boon to the classroom was Dr. Francis F. Field, of Waltham, Mass. Up to that time the chalk used was the crude mineral brought from England, which was far less than satisfactory.

Dr. Field hit upon the idea of pulverizing the crude chalk, removing the grit, and then moulding it into the shape of sticks. Of course there have been many refinements since that time, but the boys and girls in school to-day as well as those whose school days are over, might give thanks to Dr. Field on this centennial of his invention.

The blackboard with its chalk illustrations of the countless school problems, ranging from the ABC's to the stratosphere reaches of mathematics, has been an essential aid in the promotion of education. It goes with the pupil from kindergarten to university. The Chinese philosopher, who said, "one picture is worth 10,000 words," was paying an advance tribute to the blackboard and its 100-year-old teammate, chalk.

Heading For Danger Zone

Eminent Scientist Says Moon Will Soon Disintegrate

The moon eventually will disintegrate into countless particles, bathing the earth in perpetual moonlight, Sir James Jeans, noted British scientist, has predicted.

"We have good reason to believe the moon soon will split into pieces," Sir James, head of the Royal Astronomical Society, declared.

He said the moon is heading for a danger zone near the earth and will first break in two, then four then eight segments, which eventually will become myriads. These particles will resemble Saturn's rings, casting continual moonlight on the earth," he said.

Proved Idea Was Wrong

At one time the late Andrew Carnegie believed that if Great Britain were to survive she must ship the royal family back to Germany, chuck overboard the established church and the nobility and reorganise on American lines, with a President, Senate, Supreme Court, etc. And the steel master shot a lusty bank roll into several English publications to further the cause by propaganda—and got, of course, exactly nowhere.

There are plants which open and close at such definite hours of the day that it is possible to tell fairly accurate time by them.

Science is growing into a Frankenstein monster which soon the scientists of the world themselves may not be able to hold in check.

This fear is expressed by Sir Richard Gregory, one of the greatest scientists in Britain. Other scientists agree with Sir Richard.

Two years ago, the British Association formed a "brain trust" in an attempt to put the monster in chains, but Sir Richard now admits that the attempt has failed.

A short time ago, Sir Richard in a dramatic speech at a Rotary luncheon at Norwich, Norfolk, defended the modern scientist and tried to explain that the man with a test tube is not a man with a load of mischief. He said that the use of good or evil of a discovery depended on the community.

Now, however, Sir Richard has changed his mind and frankly admits that there is justification in the increasing uneasiness and suspicion with which the ordinary man is viewing the efforts of the laboratories.

"Ethical considerations are almost totally non-existent among scientists," he observed. "To them new knowledge is the thing."

Just recently I saw a description in a technical journal of some new mustard gas.

"The scientist who published that paper did not speak of his discovery as a mustard gas. . . . He had merely effected a re-grouping of certain compounds."

"To him his achievement was merely an interesting piece of research in organic chemistry, and he just stated the facts. But the world has another dangerous gas."

"The biggest job which faces us to-day is to solve this old problem of the responsibility of the scientist with regard to his discoveries and the rest of the community."

"One item of research properly applied might find work for tens of thousands, and another throw thousands out of work. One result of research wisely applied may save human lives and another destroy them. It is manifestly wrong that the scientist's responsibility should end with the announcement of his discovery."

A. G. Church, who, as an executive of the British Science Guild and the Association of Scientific Workers, was concerned with the British Association plans for a "brain trust" to maintain a check on discoveries and their applications is not hopeful for the future. He particularly:

"The efforts we made to get scientists to weld themselves together into a profession with a corporate sense of responsibility like lawyers, doctors, and others, have failed abominably."

"Some time ago we made an attempt to find out how far scientists were prepared to limit themselves against work which might have harmful potentialities to the community."

"Professor Sir Frederick Soddy suggested a resolution that members should not accept subsidies to engage in special research work into poison gases for military purposes."

"Our members would have none of it. Eventually a resolution was passed to the effect that university teachers should not accept subsidies for such work as this would be contrary to the spirit and tradition of learning."

"The trouble is that the average scientist is far more arrogant about his work than the normal man, and he declines to admit any measures which he considers a restriction on the pursuit of knowledge."

"But 'this freedom' in research has great dangers to the world to-day."

"We ought to have an ethic like other professions. It is up to the great leaders of science to give a lead in this respect. It is time that the man in the laboratory realised how his work affects the man next door."

The Only Drawback

Two old settlers, confirmed bachelors, sat in the backwoods. The conversation drifted from politics and finally got around to cooking.

"I got one of them cooking books once, but I never could do nothing with it."

"Too much fancy work in it, eh?" "You've said it. Every one o' them recipes began the same way: 'Take a clean dish, and that settled me.'"

A locomotive built in England for use on a mountain railway in South Africa has six separate engines, any one of which can be disconnected in an emergency without impairing the efficiency of the others.

WORLD HAPPENINGS BRIEFLY TOLD

More than 80 anarchists have been arrested in Tokyo and Osaka and are being held on charges of planning an anarchist uprising.

The full name of the Duke and Duchess of Kent's son will be Edward George Nicholas Paul Patrick. It was unofficially reported. He will be known as Prince Edward of Kent. Canada, in time, will have a population of 179,000,000, it has been predicted by Prof. Griffith Taylor, formally inducted into the new chair in geography at the University of Toronto.

People who live on streets with English, French and Belgian names in San Remo, Turin, Milan and other Italian cities have asked authorities to change them to "Aduna", "Makale", or "Italia".

Sergeant-Pilot Park, whose home is in British Columbia, and two other men of the Royal Air Force, were instantly killed when two planes collided 1,000 feet over the Abingdon station.

The Alberta government will enforce the provincial Trade and Industry Act, after certain changes, the Calgary branch of the Retail Merchants' Association has been assured by Premier Albert.

The Young Women's Christian Association announced that Lady Tweedsmuir, wife of Canada's new governor-general, had consented to become patroness of the association in Canada.

Another step in the modernization of ancient Palestine was taken recently when the Arab town of Tul-karem, in the central part of the country, was illuminated with electricity for the first time.

Notwithstanding the recent series of fatal airplane crashes, U.S. senate commerce subcommittee investigators have concluded after a thorough survey that travel by air today is "three times safer than it was 10 years ago."

Climbing Out Of Depression

British Dominion Sees To Be Leading The World

Which are the nations who are climbing most rapidly out of the depression? They are the British nations. Canada's trade leaped up 22 per cent last month. Inspiring news comes also from little New Zealand, where Mr. Coates, the finance minister, boldly states that the Dominion's economic problems are "largely solved". Cuts are being restored, emergency taxes reduced, pensions increased. On top of that Mr. Coates gives a new break to his countrymen. Population of New Zealand, 1,618,000; public works expenditure announced, \$5,630,000. That means the inauguration of new homes and amenities for New Zealanders at the rate of \$3 10s a head.—London Daily Express.

In Italy, where the cost of a radio receiver license is high, there are only about 200,000 listeners in a population of 40,000,000.

SASKASAL MINERAL SALTS

Medicinal Salt from Little Indian Lake Saskatchewan, Canada. Redwood and concentrated for your use at Home. Gratiety results recorded in cases of Rheumatism, Neuritis, Impure Blood, Constipation, Indigestion, and kidney ailments. SASKASAL is the only mineral salt which is pure and free from any adulteration.

Saskatchewan Winning In Fight Against Tuberculosis With Aid of Christmas Seals

Definite proof that Saskatchewan is winning out in its fight against tuberculosis is afforded by the steadily decreasing death rate from this disease and the lessened demand for accommodation in the three sanatoria of the province.

A few years ago, with these three institutions operating full capacity, over 100 patients had to be housed in regular hospitals. This total has now been reduced to 20, and within another year, it is confidently anticipated, all tuberculosis patients in the province will be housed in the three sanatoria provided for this purpose. Further, the death rate in Saskatchewan on a per capita basis is lower than in any other province of Canada, and very close to being the lowest in the entire world. Not long ago the death rate from tuberculosis was three in 1,000 every year; the present death rate from tuberculosis in Saskatchewan is one in 1,000 every two years.

The Saskatchewan Anti-Tuberculosis League began its fight against the great white plague in 1910 and in 1917, with the co-operation of the Provincial Government, the first sanatorium was erected at Fort Qu'Appelle. Two additional sanatoria have since been provided, one at Saskatoon and another at Prince Albert, with a total bed accommodation of 720.

Another great forward step was taken in 1929 when Saskatchewan, in advance of any other Canadian province or any other nation in the world, established free treatment for tubercular people. Funds for the care of the tubercular sick in these institutions is provided through taxation by the Provincial Government, and the urban and rural municipalities.

The preventive work of the League, financed by the proceeds from the sale of Christmas Seals, is in a large measure responsible for the decrease in the number of cases and in curtailing the spread of the disease. Clinics are held monthly at Regina, Moose Jaw, North Battleford, Swift Current, Yorkton, Canora, Melville and the Dale, at which free examination is available for all with symptoms of the disease or who have been in contact with the tuberculous sick.

Crochet a Rug For Your Home

Whether you use rugs, rug wool or candlewick, you can make a stunning crocheted rug. Three tones of one color or contrasting colors are effective. Use it in the bedroom, living-room or entrance hall—it will add much to your home. And the pillow matches it, thus repeating the decorative note. You'll find it an easy pattern to crochet. If you want to give someone something real big for Christmas, this would be a splendid choice. In pattern 5469 you will find complete instructions for making the set shown; an illustration of it and of the stitches needed; material requirements. To obtain this pattern send 20 cents in stamps or coin (coin preferred) to Household Arts Dept., Winnipeg Newspaper Union, 375 McDermott Ave. E., Winnipeg.

There is no Alice Brooks pattern book published.

Was Entirely Trustworthy

Sir Frederick Ponsonby Given Secret Letters By Kaiser's Mother. Baron Syonby of Wonerah, better known as Sir Frederick Ponsonby, for 20 years keeper of His Majesty's privy purse, who died a short time ago, had served in the households of Queen Victoria and King Edward and few of their aides enjoyed greater confidence.

He was descended on his mother's side from the second Earl Grey, author of the Reform Bill of 1832. He was the second son of General Sir Henry Ponsonby, for many years private secretary to Queen Victoria.

He was appointed assistant keeper of Victoria's privy purse in 1894 and three followed a long series of highly confidential posts at Buckingham Palace. When the Empress Victoria, the Queen's daughter, widow of Emperor Frederick, was dying at Friedrichshof in 1901 she summoned Sir Frederick from London secretly and entrusted to him her private correspondence, saying:

"I do not want a soul, certainly not Willie (her son the Kaiser Wilhelm II.) to know you have got them." He succeeded in taking to London two large corded boxes and when the Empress died the grounds of the castle were surrounded by cavalry and police while searchers for the letters ransacked every room. He kept the letters for 27 years and then decided on their publication "in the interests of historic truth."

When the letters of his mother were published in England in the Fall of 1928 the former Kaiser was reported to contemplate legal action to suppress the book. A few weeks later, however, it was said in Berlin that Wilhelm not only urged the unaltered publication of the letters in German, but had written a 1,700-word introduction to the German edition, the translation to be supervised by Sir Frederick Ponsonby.

Pioneers Honored

Cairn Unveiled By Founder Of First Icelandic Settlement

The dramatic history of Icelandic pioneers who first lived on the shores of Lake Winnipeg in 1875, was fittingly marked 60 years after when a memorial was unveiled at Gimli, Man., by Captain Sigtryggur Jonsson, first discoverer of the site of what is now Gimli.

Jonsson, approaching his 80th year, brought the first group of Icelandic settlers to Gimli in 1875 from Moorhead, Minn., by way of Winnipeg. The party made the trip in a boulder fixed to the rock, symbolizing the lasting qualities of the early pioneers. On the west side of the boulder, engraved in Icelandic and English, is the following inscription: "The first Icelandic settlers arrived here Oct. 18, 1875." The names of the various districts of the first settlement are carried on the reverse face of the cairn.

Roughly speaking approximately 50 per cent of coal in the vein reaches the consumer. Things could be worse. Housewives haven't started to pickle spinach yet.

SUNDAY SCHOOL LESSON

NOVEMBER 24

THE MESSAGE OF HAGGAI

Golden text: I was glad when they said unto me, Let us go up to the house of the Lord. Psalm 124:1. Lesson: Ezra 3:1 to 6:22; Psalm 84:1-12; Haggai, Chapters 1, 2; Zechariah 4:1-10. Devotional Reading: Psalm 122.

Explanations And Comments

Combating the Mental Attitude of the People, Haggai 1:1-6. This address of the prophet Haggai was made to Zerubbabel, the governor of what was now the Persian province of Judah, and to Joshua, the high priest, in the sixth month, in the first day of the month, in the second year of Darius the Persian king, B.C. 520.

"It is not the time for us to come, the time for Jehovah's house to be built," the disheartened people were saying, but Haggai was sure that it was the time God would have them build. They were waiting for the right time, the psychic moment, as it were, to build, but they had not waited for the time to build their own houses, the prophet reminded them. Some of them had built exceedingly well, but the disheartened people were saying, "It is not the time for us to come, the time for Jehovah's house to be built," the disheartened people were saying, but Haggai was sure that it was the time God would have them build. They were waiting for the right time, the psychic moment, as it were, to build, but they had not waited for the time to build their own houses, the prophet reminded them.

Endorses Light Clothing

Welsh Doctor Believes It One Preventive Against T.B.

During a discussion on his annual report, Dr. Milton Jones, medical officer for Llanfyllin rural council, said he found girls under 20 were less susceptible to tuberculosis than boys under 20 and said the reason was that girls wore scanty clothing, which allowed sunlight and fresh air to get at them. Women, too, were less susceptible to tuberculosis than men because they wore less clothing.

When the doctor said that with correct diet nobody need suffer from indigestion a member remarked that doctors suffered from indigestion. Dr. Jones replied that that was because doctors were so often called away from their meals.

Followed Instructions

"Now you must be very careful how you answer," said the counsel, "and not say anything that is not strictly true. You drive a milk cart, don't you?" "No, sir." "But I thought you did. What do you do for a living, then?" "I drive the horse that pulls the milk cart, sir."

One large duck farm in Eastern Canada is planning to ship 2,000 boxes of ducks to England before the close of navigation at Montreal and to hold them in storage for subsequent sale.

ASK YOUR DOCTOR FIRST, MOTHER

Before You Give Your Child an Unknown Remedy to Take

Every day, unthinkingly, mothers take the advice of unqualified persons instead of their doctors'—on remedies for their children.

If they knew what the scientists know, they would never take this chance.

Doctors Say PHILLIPS' For Your Child

When it comes to the frequently-used "milk of magnesia," doctors, for over 60 years, have said "PHILLIPS' Milk of Magnesia"—the safe remedy for your child.

Remember this—And Always Say "Phillips' When You Buy. Your child deserves it; for your own peace of mind, see that you get it—Genuine Phillips' Milk of Magnesia.

Also in Tablet Form: Phillips' Milk of Magnesia Tablets are now on sale in all drug stores everywhere. Each tiny tablet is the equivalent of a teaspoonful of Genuine Phillips' Milk of Magnesia.

MADE IN CANADA.

PHILLIPS' Milk of Magnesia

MADE IN CANADA.

Fire Chief Battles Water

Rescued People From Flooded District In Montreal

Arthur Ferron, acting district chief of the Montreal fire department, has celebrated his 30th anniversary of his joining the fire fighters. In the years since he joined the brigade he has been repeatedly decorated for brilliant rescue work at bad fires, but his greatest rescue had nothing to do with his arch enemy. In the half light of a below-zero dawn, a three foot water main burst in a crowded Montreal district. The streets were flooded and houses were collapsing when Capt. Ferron and his crew arrived. Despite the imminent danger, however, this veteran smoke-eater rescued two entire families who were on the point of drowning. For his bravery he received the Royal Canadian Humane Society's life-saving medal.

When Capt. Ferron and his crew arrived, however, this veteran smoke-eater rescued two entire families who were on the point of drowning. For his bravery he received the Royal Canadian Humane Society's life-saving medal.

Safety For Pedestrians

Pedestrians who must walk alongside highways at night will find their measure of safety increased if they carry or wear a white object, Keystone Automobile Club officials pointed out at Philadelphia. A white handkerchief, for instance, displayed against dark clothing, increases a hiker's chances of being seen by motorists by approximately 100 feet.

CHAPPED SKIN? NO!

HINDS RELIEVES HANDS AND KNEES CHAPPED BY SNOW AND WIND

HINDS Honey & Almond CREAM

Save "LEFT-OVERS" with Apple or Raisin Presto Pack WAXED TISSUE

MORE CONVENIENT TO USE

Just hang a package in your kitchen. You'll be delighted with its convenience. You can easily extract a single sheet at a time leaving the other hand free to hold the "left-over" being wrapped.

Warehouses At Calgary, Edmonton, Regina and Winnipeg

House Of The Future

Took Prize In Architectural Contest For Cheap Dwelling

A \$5,500 "House of the Future" on view to large crowds at Rockefeller Centre is the first of some 500 model houses built on the same plan which will be displayed throughout America and may be influential in changing the country's dwellings to small flat-roofed units of modern design. Anything new in housing is attracting large crowds, which the people who see things around corners interpret as meaning a new boom.

The "House of the Future" is not a factory made job. It is the prize-winning plan in an architectural contest for a house at that price. But a factory-built house announced by the sponsors of the contest was announced at \$3,800. Which may be indicative of the future competition the individual builder is going to get from mass production.

The floor lamp, the delight of the women and the bane of the men is gone in this "House of the Future." All lamps are architectural built into the walls or ceiling.

The windows are steel casements which spring wide open. No showing them out. You have to pull them in.

This house is three rooms with kitchen, bath and dining alcove. The partition between the living-room and dining alcove is made of clear glass blocks three inches thick. It is an outside wall of one of the bedrooms.

The electric oven has a temperature control with an operating clock. Put in your leg of lamb before you go out in the morning. Set the temperature at 350 Fahrenheit. Set one dial of the clock at 4:00, the other at 6:00. When you return home late at 6:10 the lamb will have been finished and held 10 minutes for you in the warm oven.

A clotheshopper is built under the bathroom wash bowl, which in itself is no larger than the units in a Pullman smoking-room. Floors are of cork except in the kitchen and bathroom, where they are rubber.

And here is the most modern decorating note. In the rooms three walls each have a different color. The fourth is mostly glass. It is not bad but you will have to see it yourself to believe it.

Mr. Rockefeller, Jr., looked it over, but is still living in his "house of the past."

Italy Put On Diet

People Must Eat Less In View Of Sanctions

Premier Mussolini of Italy has put the nation on a six-month diet to fight the sanctions imposed by the League of Nations.

The first of the measures, effective Nov. 5, ordered restricted sale of meats to reduce the necessity of imports, and restrictive measures were also put on public dining.

It is also preparing a plan to reduce the governmental use of paper and other supplies that are partly imported.

The first of the orders to become effective will close butcher shops Tuesdays and Wednesdays during the duration of the Diet law. Sale of canned food of any kind is to be rigidly restricted. The butcher shops, in payment for the two days' closing, will be permitted to remain open Sundays until 11 a.m.

Hotels, restaurants and dining cars will be forbidden to serve more than one meat or fish dish at a meal.

To increase the food supply the fish industry promised to increase production. Restrictions on game have also been lifted to encourage its use as a food.

Spaghetti and bread were found to be safe because the 1935 wheat crop was officially given at 282,000,000 bushels, which, plus the reserve stock, is considered sufficient to cover the nation's needs.

Sea Fisheries Gain

Canada's sea fisheries registered an increase of more than 37,500 cwt. in quantity and \$73,000 in inland value during August, compared with the same month of last year. Catches of sea fish and shellfish totalled 1,572,000 cwt. with a value to the fishermen as landings of \$2,502,000. August landings on the Pacific coast increased by nearly 41,000 cwt. and landed value by over \$64,000. On the Atlantic coast the landed value increased by almost \$9,000, but the quantity of fish and shell fish taken fell off by approximately 13,000 cwt.

Having spring steel ends that curve inward, a new book rack expands when additional books are placed in it.

"You look like a nice sensible girl. Let's get married."

"No, I'm just as nice and sensible as I look."

AUSTRALIA'S STRONGEST MAN DEFIES STRANGULATION

"Young Apollo", whose real name is Alex Anderson, is twenty-four years of age and weighs only 139 pounds, but at a recent demonstration in Melbourne, Australia, he defied strangulation when four men applied their weight to a rope around his neck. Here we see him performing this amazing feat. The same day he dragged three automobiles, each carrying six passengers, a distance of 32 inches. The cars weighed almost four tons and this effort by Young Apollo was a record.

The Modern Chinese Woman

Anti-Foreign Feeling Rapidly Fading Especially Toward The British

The emancipation of Chinese women is now an established fact, and although comparatively recent is complete, stated Miss Florence Kirk, English teacher in Ginning College, Nanking, China, while in Saskatoon on furlough after three years spent in the east.

Many married women in China continue with their careers, she said. In China to-day she found there is a pressing need of trained workers, and men are only too willing to welcome women to jobs which they can fill. China's unemployment for educated young people is non-existent, she stated. She added that there are two graduates for every graduate of the college in which she teaches.

In 1911 the formation of the Chinese republic opened the way for Chinese women to gain their freedom. Miss Kirk stated, and they have made rapid progress since then. In many ways she found the women more enterprising than the men, especially in assimilating new ideas.

Students come to Ginning College from all parts of China, Miss Kirk said, and they speak so many dialects that they are often forced to converse with each other in English.

In many parts of China English appears to be almost a second tongue.

At a field meeting in Nanking, she said, the government, in an attempt to make the gathering of a truly national character, decreed no English would be used by speakers. The audience was confused by the different dialects and totally unable to understand the addresses. The speakers were forced to revert to English.

China's anti-foreign feeling is rapidly fading, she stated, especially toward the British.

Might Ensure Peace

If Men Who Started Wars Were Forced To Fight

A university head has made the revolutionary proposition that governments in the future protect youth by drafting only men past fifty for combat troops in time of war.

In theory there is much to be said for his proposal. The idea of making cannon fodder of young men, upon whom the future of nations depends, is not altogether sensible, particularly when it is remembered that wars are generally started by men over 50 years of age. Is not young blood more essential to national progress.

There would be no more wars if the nations of the world would enter into a pact making men under 50 exempt from military service. There will never be such a pact because all past, including those sending millions of young men to horrible deaths, are made by men over 50. But if such a pact were possible, the men over 50 would quickly declare permanent world peace. Persons who must fight their own battles prefer to talk peace.—Sarnia Canadian-Observer.

New Motor Vehicles

New motor vehicles sold in Canada in September totalled 3,987 units, compared with 4,010 in September last year and 3,441 in the same month of 1933. Production of automobiles in Canada numbered 5,323 in September, a decline of 21 per cent. from the July production and nine per cent. from September of last year. The figures might indicate a run on the used car market, but they don't.

Real Strategy

"Good morning," said a stranger to a woman who had answered the door bell where a room was advertised for rent. "Would you like to buy some insect powder?" "No," she snapped. "I have no use for such stuff." "Good," replied the stranger. "I will take that room you are advertising."

New Dress For Steel

Can Be Made To Resemble Marble Tapestry

Steel has been given many disguises in its career; it may be made to look like a mahogany or walnut panel or plaster wall with equal ease. But never until recently has steel been able to look like a slab of marble or a Gobelin tapestry.

Such marvels aren't done with mirrors, but with ordinary photographs, or with decalcomania, those same "transfer pictures" you used to stick on the back of your hand when you were young.

To make this versatile material, tene plate is heated almost to the melting point of its coating of lead alloy. Then a thin layer of felt or other fabric is pressed into the softened alloy surface, immediately chilling keeps the fabric from being charred.

A photograph colored decalcomania of whatever is to be "steelized" is laid on this fabric surface, saturated with resin and baked under pressure.

The result is a laminated sheet of steel, tene alloy, felt, and resin-imregnated paper. The sheet has steel's strength, but it neither looks, nor feels, nor sounds like steel.

This new material has been suggested for interiors of office buildings, store fronts, and other applications where steel's strength and low cost are advantageous, but where the appearance of marble, or any colored finish is desired.—Daily Commercial News, Toronto.

Alberta Cheese Wins

Alberta cheese leaped into the limelight when an exhibit of three entries from a cheese factory near Edmonton, in competition with three famous dairying areas as the Fraser Valley in British Columbia, took all three first prizes in the cheese classes at the Vancouver Exhibition. The prize-winning Alberta cheese came from a little factory at Burford, and the fact that this pioneer settlement was able to sweep the boards in the face of stiff competition from cheese factories of many years' standing was widely commented on by dairymen at the coast.

It used to stand for "Royal Canadian Mounted Police." Now R.C.M.P. means "Royal Canadian Motorized Police."

How to keep Cleopatra's Needle in London from crumbling away due to dampness, is perplexing British scientists.

INVADERS FACE SHORTAGE OF WATER

It is the task of a large corps of men to sink new wells in the wake of Italy's advancing troops in Ethiopia to provide the invaders with their all-important water supply. Water piped from one of the new wells is being tested, above. Shortage of water has been held as a serious threat to the Italian campaign in Abyssinia.

The Art Of Journalism

American Publisher Says Anybody Who Can Think Can Write

Whatever people may think about what he writes, few practicing journalists can find professional fault with the way William Randolph Hearst writes it. Lately, Washington Columnist Paul Mallon, had the nerve to ask Publisher Hearst if his writings were all his own. Last week Mr. Hearst replied as follows:

"You asked me if I write all the articles I sign. That, sir, is not a very complimentary question. . . . I am a professional newspaperman, Mr. Mallon, and I have been working at the newspaper business—not playing with it, but working at it—day and night for over 50 years. . . . Of course, I write my signed articles, and many more that I do not sign. . . . I do not think it is such a trick to write. Anybody who can think can write."

"You ask me when I do my writing. I do most of it at night. There are so many executive problems during the daytime. . . . At night things cool off and quiet down. The stars come out. . . . Then—ever—a story thought is likely to come swirling out of the darkness like a bat, and light on you. . . . I wish I could write books that live, like Dickens or Thackeray. . . . All I do is scratch down a few evanescent thoughts that are born in the night, and hardly live out the day. . . ."—Time.

Debt Owed To Indians

Early Settlers Learned Many Useful Things From Red Men

The debt we owe to the red man? What debt? Well, perhaps it doesn't sound like much in an industrial age of superhighways, delicatessens and countless modern conveniences. How to plant and cultivate corn and to store it for winter. How to make foods from cornmeal. How to use pumpkins, squashes, sweet potatoes, beans and other strange edibles of field and forest. How to stalk deer, elk, moose and buffalo and how to cook fashions in the sun. How to trap rabbits and to catch wild fowl. How to spear fish and to inclose them in soft clay baking. How to raise tobacco. How to get sap from maple trees and how to get sugar from the sap. How to fashion canoes, shelters, snowshoes.

Not much of a debt in terms of today's money, but it was really recognized by the newcomers to whom such knowledge meant life instead of death in the wilderness 300 years ago. Realize it or not, the fellow who lives in apartment comfort with a worry about shelter or food, owes a lot to those first Americans, who, in Will Rogers' pungent phrase, met the Mayflower.—St. Louis Post-Dispatch.

Presence Of Mind Needed

Nerves And Self-Control Required For The Car Driver

An automobile driver needs a good deal of supplementary equipment—jack, tire tools, flashlight and so on.

The most important item of all, however, is one that can't be bought at any equipment store: the necessary amount of courage to stick around and make a report after he has somebody with his car.

A homeless wanderer was struck by a speeding car and killed on a Cleveland street the other night.

Police traced the driver and pinched him a few hours later. He was in a state of nervous collapse.

"It was so horrible and I was so scared and sick I didn't know what I was doing," he said, in explaining his haste to get away. "I just got back in the car and drove away. I wouldn't leave a dog lying in the street, let alone a man. But I didn't know what I was doing."

It would be a good thing if every motorist could make a little agreement with himself to the effect that if his car hits anyone he will stop, give his victim whatever aid he can, and then report to the police before going home.

It takes nerve, self-control, sometimes—but a man who is a man must be ready to take the consequences of his mistakes.—Vancouver Sun.

Provisions In Hollow Rope

In attempting a flight to the North Pole in 1907, the dirigible "America" carried ham, bacon, butter, bread and other provisions in a 134-foot hollow leather guide-rope. Six inches in diameter, the rope was so constructed as to move over ice floes without resistance and float in the water.

True flying saucers can make gliding flights through the air for more than a hundred feet.

Neveda has its first museum—the Lost City Museum, near prehistoric Indian ruins.

Small Home Industry

Two Million Dollar Business Operates Through The Large Stores

No markers are necessary to inform the motorist driving into North Georgia that the Tennessee boundary line has been passed.

Thousands and thousands of bed-spreads, drapings in the autumn breezes semaphore the northwestern Georgia stretch of the Dixie Highway.

For 60 miles—from Ringgold on the north to Acworth on the south—myriads of candlewick spreads add a panoply of color to the natural scenic beauty of the highway.

"Pretty big families in Georgia, eh?" is the first reaction of the stranger.

After frequent remarks about the "size of the wash", the stranger will then ask why every nine out of ten spreads have the peacock design.

That one is easy! This pattern can be made of the "left-over" thread, due to the many colors in the design. It means a neater profit to the spread worker.

But all jokes aside, this fire-side industry has practically eliminated the word "depression" from conversations in northwest Georgia.

This two-million dollar small home industry, employing from 7,000 to 10,000 home workers with an annual payroll close to \$600,000, has given part-time employment to hundreds of families who had no other means of support except apply to the government for relief. Majority of these workers could not have qualified for factory work.

Approximately 95% of the work on spreads is done by wives and daughters of tenant farmers. Cripples and old persons in their declining years have been only too glad to do the needlework in order to remain financially independent and keep off the relief rolls.

The industry does not confine its sales to the whims of a fickle motoring public. Just about 10% leave Georgia this way. The big volume of business is done through department stores, manufacturers and distributors.

More than a million spreads will be shipped by manufacturers in 1935, it is predicted. Advance orders indicate that more than half year in the history of the industry with the volume of sales rising over the two-million dollar mark.

In 1933 the total volume of sales was nearly a million and a half dollars. Last year the sales were a trifle higher.

There are 30 recognized manufacturers and distributors. Twenty-one are located in Dalton, Ga., three at Calhoun, Ga., one at Chatsworth, Ga., one at Rome, Ga., another at Hill City, Ga., one at Sumter, S.C., one at Scottabrook, Ala., and another at Tullahoma, Tenn. Two Dalton plants have established factories in Canada.

Alberta's Fire Toll

Property Loss In Province During 1934 Was \$1,177,370

Fires took a death toll of 35 persons in Alberta during 1934, an increase of five over the year before, according to the annual report of Henry Brace, fire commissioner for the province.

Of the deaths, 17 were due to the improper use of gasoline in cleaning clothes or lighting fires with kerosene.

School losses in country districts present a serious problem, says the report. This is due to the majority being of log or frame construction with little or no protection.

Last year, 33 schools burned, with a total loss of \$31,422, compared with 20 the year before when the property loss amounted to \$25,580.

During the year, 28 fires of incendiary origin in various parts of the province were investigated. Property loss in the province last year amounted to \$1,177,370, a decrease of \$258,242 compared with the year before.

Quite A Family Affair

The name Jones appeared eight times on a marriage register in England following a wedding at Ellersmere Fort parish church. The Rev. J. Fox Jones officiated at the marriage of David Blinston Jones, son of David Maurice Jones, and Miss Phyllis May Jones, daughter of Thomas Henry Jones. The two witnesses were Ronald Jones and Miss Ruby Jones.

No Excuse For Neglect

There were over 5,817,876 Canadians entitled to vote in the federal election this year and 4,022,976 of them exercised their franchise. It was a record vote—gratifying—but still not good enough. Many of those million eight hundred odd thousand people who didn't vote would have a hard time finding a real excuse for their neglect.

The Man Who Knows

Whether the Remedy You are taking for Headaches, Neuralgia or Rheumatism Pains is SAFE is Your Doctor. Ask Him

Don't Entrust Your Own or Your Family's Well-Being to Unknown Preparations

BEFORE you take any preparation you don't know all about, for the relief of headaches, or the pains of rheumatism, neuritis or neuralgia, ask your doctor what he thinks about it—in comparison with "Aspirin".

We say this because, before the discovery of "Aspirin", most of the "cure-all" remedies were advised against by physicians as being harmful for the stomach, or for the heart. And the discovery of "Aspirin" largely changed medical practice.

Countless thousands of people who have taken "Aspirin" year in and out without ill effect, have proved that the medical findings about its safety were correct.

Remember this: "Aspirin" is rated among the fastest methods yet discovered for the relief of headaches and all common pains... and safe for the average person to take regularly.

"Aspirin" Tablets are made in Canada. "Aspirin" is the registered trademark of the Bayer Company, Limited. Look for the Bayer cross in the form of a cross on every tablet.

Demand and Get "ASPIRIN"

Eliminates Static

Boon For Radio Fans Is Seen In New Demonstration

Radio reception free from static even during thunder storms to severe that sparks leap from the antenna wire is the offering of Major Edwin H. Armstrong, professor of electrical engineering at Columbia University. He demonstrated a new system before the Institute of Radio Engineers in New York. He described the effect as the same as sending one stream of traffic—the static—through an underpass while the desired signals went across a bridge. The new secret lay in frequency modulation instead of amplification modulation, the prevailing system.

About 20 per cent. of the students preparing for the medical and dental professions in Germany are now women.

Mothers Aided by Guide to Better Control of Colds

Practical Plan Is Helping Families Everywhere to Have Fewer, Milder and Shorter Colds

SIMPLE AND EASY TO FOLLOW

Already, thousands of Canadian mothers are benefiting by following Vicks Plan for Better Control of Colds—a proving for themselves that it is a practical home guide to fewer and shorter colds.

This commonsense, medically sound plan represents the 30 years' experience of Vicks Chemists in studying colds. It has been tested in extensive clinics by practicing physicians—further proved in everyday home use throughout the country.

Here, briefly, are the three simple steps in Vicks Plan:

1. To Help Build Resistance to Colds. Live normally—avoid excesses. Eat simple food and keep elimination regular. Drink plenty of water. Take some exercise daily—outdoors preferably. Get plenty of rest and sleep.
2. To Help Prevent Many Colds. At the first warning nasal irritation, sniffle or sneeze, use Vicks VapoRub—just a few drops in each nostril. VapoRub is especially designed for the nose and upper throat—where most colds start. Used in time, VapoRub helps to prevent many colds—and to throw off head colds in the early stages.
3. To Help End a Cold Sooner. If a cold has developed or strikes without warning, rub throat and chest at bedtime with Vicks VapoRub. VapoRub acts two ways at once: (1) By stimulation through the skin, like a poultice or plaster; (2) By inhalation of its penetrating medicated vapors, direct to inflamed air-passages. Through the night, this combined vapor-poultice action loosens phlegm, soothes irritation, breaks congestion.

What Vicks Plan can do for you and your family can be proved only by trying it. Directions for following the plan come in each package of Vicks VapoRub and Vicks VapoBalm.

MISS ALADDIN

—By—
Christine Whitting Farmer
Author of
"One Wide River To Cross"
"The Unknown Port," Etc.

SYNOPSIS

Nancy Nelson is a sub-deb, a gay, irresponsible girl of nineteen, with no care beyond the choice of her costume for her coming-out party. Suddenly, in the market crash, her indulgent father loses all he had, and his family is faced with the necessity of a simpler method of living. At this juncture a letter is received from an eccentric relative in Colorado, who offers the girl a home on what seems to be impossible conditions.

After much consideration Countess Columbus's offer is accepted, and Nancy and Jack arrive at Pine Ridge. Nancy set out one afternoon to climb to the top of a hill so as to obtain a view of the surrounding landscape and misses the path Aurora Tabbs had told her to follow. A truck comes along the road, driven by Matthew Adams, and she asks him which way to go. They descend the hill, look around, and then go on to the Columbus's. There Mark Adams tells Nancy that his brother Luke has broken his leg, and that Jack Nelson has been hired to help out while Luke's leg gets better. With Jack away, Nancy finds that she is lonely, and a steerable boat arrived in due course. Father Adams painted signs for the library, and the Adams boys worked on the shelves for the books and decorations to make the library a home.

Jack Nelson, Matthew Adams, and Nancy go to the prairie home of Matthew's uncle for the ride, and after Nancy and Jack leave for home, they are caught in a blizzard. Blinded by the swirling snow, they collide with a bus full of school children, which was stalled across the road with its back wheels resting in a snowdrift. Their car being wrecked, Jack and Nancy stay with the children and do what they can to help. The next morning Jack sets out for help in the blizzard. He succeeds in finding help, and the party of children and Nancy are rescued. As a result of the exposure Nancy's feet are badly frozen and Jack is seriously ill with pneumonia, but both of them recover.

Now Go On With The Story

CHAPTER XXIII—Continued

Nancy started, smiling as she recognized the wife of the health-seeker on the back road, one of the library's most faithful visitors. "Come in," she welcomed. "I'm leaving day after tomorrow and am glad of this chance to say good-bye."

The woman said, as she sat down in the cushioned chair: "That's why I came. I meant to stop at Miss Nelson's, but when I saw these open windows I knew you'd be here. I want to thank you for what you've done for me—well, for every one in Pine Ridge, Miss Aladdin." She glanced up, her worn face lighted. "You're while Nancy realized with something of a shock that this faded woman was quite young, probably not ten years older than herself. "Do you mind my saying, Miss Aladdin?" she questioned a bit shyly. "Sometimes I've almost wondered if that's what you are—a sort of magician who has worked miracles."

Nancy laughed, flushing a little too.

"It wasn't a miracle at all, if you mean this library. It was only common sense and a bit of elbow grease."

"No," answered her caller wisely, "it was more than that. It was thinking how you could make life happier for other folks. It's made all the difference between exile and home, to us," she added. "My husband's better now, really better; and it's due to you being in the world but having good books to read—something to take his mind away from himself and all our worries. Is it any wonder we think of you as Miss Aladdin?"

When she was gone Nancy sat there feeling strangely humble, a lump in her throat that threatened to grow bigger.

"I ought to have gone to see those people," she said regretfully. "I'll ask them to drop in on them some day. Why, the first time that woman came for books I thought she was older than Aunt Judy! Oh, why does life hurt some of us so cruelly?"

Rising with reluctance, Nancy closed the windows. That was her last visit to the library, for to-morrow she must give to Cousin Columbus. The girl stood for a moment looking off at the mountain; and suddenly she longed to view it once again from the hilltop under the old pine.

"I'll sneak up back of the houses," she planned, locking the door. "If Jack sees me he'll want to go along, and somehow I'd rather be alone. I can stay a half hour, get back before the Adams send for me. I do

hope Matt will have cheered up by evening. I just can't stand the way his eyes look."

By skirting the village it was possible to gain the hilltop unobserved, but it was a steep ascent, and Nancy was breathless when, emerging from the woods, she started toward the ancient landmark. Then, as an animal will stop when suddenly alarmed, the girl stood still. Some one was there, half hidden by the gigantic tree-trunk. How disappointed! Her trust on this wonderful spot must be foregone. She ventured one cautious backward step, but a twig snapped under her foot, and the intruder, almost as startled as herself, turned quickly.

"Oh!" exclaimed Nancy. Her heart was thudding. "I didn't dream—I mean, Matt, I—I thought..."

She paused, for Matthew had sprung up, as usual, Matthew who, said, curiously, she noticed, as he came toward her: "Is it you, Nancy, or—or am I dreaming? No, I'm not crazy!" (He smiled a little.) "But I've been waiting here for an hour or more wishing I had the power of Aladdin, so I could rub my lamp and—make you appear before me—just like this! Is it really you?"

Nancy thought, her mouth curving in a smile: "What other fellow in the world would say a thing like that?" Then with a sudden impulse she stretched out both hands.

"Touch me, and see!"

CHAPTER XXIV.

No use trying; it was simply impossible to sleep. Thus thought Nancy as she turned, and tossed, and thumped her unfeeling pillow. The night was weirdly bright, as most nights are in Colorado, and (perhaps because she knew where each one was), the furnishings of the tower room which seemed so depressing eight months before, were dimly visible: the fat infant embroidered on the "splatzer"; the mineral specimen clock which never ticked; the deformed kettles painted in oils; General Grant, and Aurora's mammoth calendar.

"It's surely strange," murmured the girl, "how you get used to things. I don't see that awful embroidered baby any more, and I've grown quite fond of General Grant and Aurora's calendar. It just doesn't seem possible that this is our last night in Colorado, and that to-morrow Jack and I'll be going along somewhere in Kansas. Why, the day we got here, when Cousin Columbus displayed the room so proudly, I thought I couldn't get away from it too soon; and now all I can think of is—suppose we hadn't come!"

About to ponder this awful possibility, Nancy turned again and saw that the door into her brother's room was opening. Said Jack, in muffled, irritated tones: "What the dickens is the matter with you, Nancy? That bed looks like a groan every time you move, and I'd say you've turned over every three minutes of the last hour. Why don't you go to sleep?"

"Too much to think about. I'm figuring out what you've happened if we hadn't come to Colorado."

"That's easy," Jack seated himself on the foot of the massive bed. "I'd be earning my car fares in a broker's office most likely; and you'd be dragging 'round Edgemore, plying yourself and running up the telephone bill by calling your long-distance boy friends every few hours, just to kill time. Honestly, sis, can you imagine living our life here, just having known Cousin Columbus, or the Adams, or—or going through that blizzard and everything? Maybe you'll laugh, but I feel lots older than when we came."

But Nancy didn't laugh. She said, thoughtfully: "You seem older, Jack. And I..."

The Body-Building Qualities of COD LIVER OIL PLUS Additional Bone-Building Minerals

Strong bodies, straight bones and sound teeth are built from the mineral salts and vitamins in Scott's Emulsion.

Scott's Emulsion is vitamin rich Cod Liver Oil emulsified for quick easy digestion and containing the best known bone-building mineral salts Hypophosphites of Lime and Soda.

PLUS VALUES you get ONLY in SCOTT'S EMULSION.

SCOTT'S EMULSION

Buttered Bran Raisin Bread
Canned Cherries or Plums Coffee
Look for the Quaker Natural Bran display at your grocer's. He has all the things you need for this Bread in the package. The recipe for Bran Raisin Bread is in the package.

Her self-analysis went no further, and after a moment the boy went on: "I'm mighty glad old Matt's got back into his stride. All this last week he's looked like a lost dog. I don't believe he's seen a lot of girls, and was sort of scared for fear he'd taken you too—well—seriously. Matt's such a dandy feller, Nancy. I'd hate to think he'd fallen for you too hard."

"So I'm not good enough for Matthew Adams?"

(To Be Continued)

Poultry Farm On Skyscraper

Secret Well Guarded By Modern Hotel In Brooklyn

That his spot the country is no longer the prime necessity of the man or woman who would keep a few, or many, chickens. The day dawns when the great metropolitan hotels may control their own egg and broiler supply on the premises, and Park avenue skyscraper palace may house a thousand millionaires and a hundred thousand fowls and baby chicks, writes J. J. Lawrence in the Sun.

By the same token, the bachelor's penthouse terrace may have his nook for farming—and the whole fascinating business may be a great secret, unguessed at, and not to be told.

There is a mystery in Brooklyn: an appealing, juicy mystery! The guests in one of the modern hotels on Brooklyn Heights have been all a-twitter about the surpassing sweet and succulent broilers in the grill room and the breakfast eggs that are just the quintessence of all hen fruit within the memory of the oldest inhabitant.

They have begged for some of those eggs and broilers to send to the folks, in place of orchids or bouquets, and talked about them in lobby and lounge; but they don't know yet—and not even the chef or the maitre d'hotel knows yet—that they come from above, like manna from the skies—yes, even from the topmost terrace of that same hotel, though never a cackle, crow or peep has been heard in the spacious roof garden or on its terraces.

The writer was the fifth person to be let into the well-guarded secret. He was conducted to a narrow terrace, far above the earth and New York harbor, an appreciable fraction of the distance to the stratosphere; and then the mysterious guide mysteriously pointed out a narrow iron ladder, and your correspondent swarmed up, like a fireman. The owner asserts emphatically that no guests of the hotel have ever suspected the presence of a single chicken on the premises, though the plant has been in operation six months.

Cannot Be Answered

Food For Thought In Child's Question

The wisest sayings often come out of the mouths of children. A man motoring with his family in the country and discussing with his wife the present-day craze for speed and the disastrous results of so often following excess of a reasonable rate of travel was interrupted by his little daughter's question:

"What is the speed limit?"

"Thirty-five miles an hour," he answered.

"Then why do they make cars that go faster?"

A separate compartment has been invented to be placed on top of a crowded refrigerator, the contents being cooled by ice cubes made in the refrigerator itself.

Diamond Is Indispensable

Mainly Responsible For High State Of Scientific Perfection

It is safe to say the civilization today could not have reached its high state of scientific perfection but for the diamond. Everything nowadays has to be made with an infinitesimal margin of error, and the diamond being the hardest thing in the world, consequent capacity to resist abrasion makes it of inestimable value in industry. To give you an idea how hard the diamond is, Sir William Crookes once prescribed the following experiment: "On a flattened apex of a conical block of steel place a diamond, then upon it bring down a second cone of steel. On forcing together the two steel cones by hydraulic pressure, the diamond is squeezed into the steel blocks without injuring it in the slightest degree."

The diamond drill is an indispensable tool for mining engineers, for there is no rock or strata which the diamond cannot cut through, and the hardness of the bit makes a clean sequence of the rocks passed available for inspection. The crown of gems for cutting the two-inch hole costs about \$5,000.

In other industries the diamond is equally important, as in the manufacture of electrical equipment. Diamond draw plates, used in drawing wire, are used in processes where an accuracy of .0015 millimeters is sometimes necessary. From the Sphere, London.

Low And High Tides

Bore In Bay Of Fundy Is Highest In World

The lowest tide in half a century was witnessed on October 12 by people of Lunenburg, Nova Scotia. Men in boats were able to wade across the bay to Campbell Island, New Brunswick. The following day the waters of the Bay of Fundy rose to an unprecedented height. Boats tied up at wharves were lifted so high that their painters had to be cast off. Debris was washed into smoke-houses, and an army of rats were driven from their holes on the waterfront. Extreme low and high tides were also reported from other points along the Maine coast.

The Bay of Fundy has the world's highest and most rapid "bore," the term used for a tidal wave which advances rapidly as a sort of wall into funnel-shaped bays and estuaries. At Chignecto it rises to over 90 feet, with a crest of three to six feet. The bore in the Amazon does not exceed 16 feet, and in the Severn, Trent and Solway Firth it attains a height of only two to three feet.—New York Sun.

Little Helps For This Week

Lift up your heads O ye gates, even lift them up ye everlasting doors, and the King of Glory shall come in. Psalm 24:9.

Fling wide the portals of your heart. Make it a temple set apart. For earthly use for Heaven's employ. Adorned with prayer, and love, So shall your Sovereign enter in. And new and nobler life begin.

Thou art to know thy soul is the centre, habitation and kingdom of God. That therefore to the end the sovereign King may rest on that throne of thy soul thou oughtest to take pains to keep it clean and peaceable. Clean from guilt and defects, quiet from fears, and peaceable in temptations and tribulations. Thou oughtest then to always keep pure that temple of God, and with a right and pure intention thou art to work, pray and obey as well as suffer whatever it pleases the Lord to send thee without being in the least moved.

Are You Run Down, Tired?

Mr. M. Murphy of 15 Westbourne Ave., Apt. 4, Hamilton, Ont., writes: "About five years ago I was terribly run down, had indigestion, couldn't sleep or eat, lost strength and my weight fell off 30 pounds. Before I had finished the first bottle of Dr. Pierce's Favorite Prescription I felt much better, had more strength and better digestion."

New size, tablets 50 cents, liquid \$1.00. Large size, tablets or liquid, \$1.50.

Uses Homing Pigeons

School Teacher Finds Them Handy For Sending Messages Home

Each Sunday afternoon homing pigeons fly into the yard of Martin Tucker of Wakefield, Mass., bringing the glad tidings that his school teacher daughter, Gladys, arrived safely in South Hampton, N.H.

Miss Tucker, who spends every week-end with her family found the telephone too expensive and the mails too slow. Homing pigeons, long a hobby of her father, solved the problem.

The pigeons return to the Tucker home in much less time than it takes for Miss Tucker to drive to South Hampton.

A blow on an eel's tail will kill it more quickly than a blow on its head.

The X-ray now can be used to determine accurately the size and weight of the heart.

Local News

Only fifteen more months to wait for our \$25.00 dividend.

Mrs. R.D. Sutherland was a visitor in Carstairs on Saturday.

Mr. and Mrs. D.J. Hall and family were visitors in Calgary on Saturday. Jack Harrison shipped four car loads of cattle, sheep and hogs on Tuesday evening.

Helen Willis was a visitor in the City on Wednesday giving her nephew the once over.

W. T. Schroeder of Dog Pound, left this week for Ovando, Mont. where he will reside in future.

Mrs. Wilson of Calgary, who has been a guest at the Mossop home, left for Calgary on Wednesday.

Charlie Weber was appointed the new skating rink Manager on Monday afternoon.

Mr. Knight of Claresholm, who was a visitor at the home of Mr. and Mrs. A. E. Edlund, left for his home on Sunday evening.

Jack Harrison turned his truck over on his way to Calgary Tuesday evening with four head of cattle in it. The truck was slightly damaged but he one was hurt.

Mr. and Mrs. T. Mair, and Mrs. H. R. Fitzpatrick, returned from Manitoba and Saskatchewan last week-end, after having an enjoyable visit with relatives and friends.

Mr. and Mrs. F. C. Wilson of Dog Pound, left Tuesday for Montreal, and will sail from there on the Duchess of Atholl for England, where they will visit at Mr. Wilsons home for the next few months.

Rev. J.H. Pickford has rented the house recently occupied by Mr. and Mrs. Ray. Gilchrist and was busy unpacking furniture on Wednesday. Dame rumor says wedding bells will ring this month.

The J. W. A. made the sum of \$52.40 at their bazaar and tea on Saturday last. The doll donated by Miss Jean Annot was won by Jerry Casey with ticket no. 32. Betty Collins did the drawing.

The play that was to have been put on November 22nd, by the Ladies Aid of the United Church has been postponed.

The Ladies Aid of the United Church will hold a tea and sale of home cooking and work on Saturday afternoon November 30th.

The Canadian Legion will hold another social evening on Monday November 25th in the Masonic Hall. Members may invite a friend, Bridge and Dancing. Admission 25 cents.

An enlarged photo of "our own" Donnie McFadyen arrived at the Chronicle Office on Monday for the Editor, which we are sure he will appreciate when he arrives back home. It is a good photo of Donnie in action and it has the following inscription on it: "To Bill; the worlds most personal Editor and worlds worst baseball dopster—Donnie McFadyen".

CARD OF THANKS

The Superintendent, Mrs. Currie and the members of the Junior W. A. wish to thank all those who helped by their giving, attendance and buying at their tea and bazaar last Saturday, and helped to make it the success it was.

Along Broadway.

Bill Blackadder telling how Billy Sunday said years ago that the world was going to hell so fast you could not see it for dust. Don said that he and Arnold saw no rabbits, but no doubt they did not wish to compete. Frank Murdoch going into a tail spin at the dance. Mrs. Willis looking for a place to trade pink baby clothes for blue ones.

Wright Wins First In Red Hard Wheat

Toronto, Nov. 20. — Howard P. Wright of Airdrie, Alberta, won the first major championship in the grain and seed classes of the Royal Winter Fair here tonight. This sample of hard red spring wheat was adjudged the best in the show.

An Ontario grower, Roy C. Chambers of Fenwick, showed the best wheat other than hard red, and may be Wright's chief opponent when the judges decide the Grand Wheat Champion of the fair. Other placings in the wheat classes were not announced with the division champions.

Premier Evades Question

In our last issue we asked Premier Aberhart a direct question regarding one of his own statements, and to be answered in his next broadcast. Mr. Aberhart mentioned the article in his Sunday broadcast but did not read the question nor answer it. Why? Was he unable to give an answer and therefore deliberately evaded it? As this is not the first time he has evaded a question, we must again say "usual alibi".

Twelve Rinks Selected

The local Curling Club have got away to a roaring start with twelve rinks lined up. A square draw is in progress after having run off a President vs Vice President competition. The personnel of the rinks are: D. Ontkes skip, W. Pogue, E. Fox, W. J. Nichol; C. Purvis skip, C. Fox, W. J. Wood, C. Aldred; W. Russell skip, F. A. Purvis, E. Gordon, Rev. E. Longmire; G. Purvis skip, A. Whillans, A. A. Hall, S. Pogue; W. Stralo skip, R. J. Hendry, H. Ballam, E. Devins; G. A. Williams skip, R. Smart, G. Y. McLean, A. Stevens; C. Becker skip, R. M. McCool, G. Johnson, F. Becker; D. Cameron skip, G. McCaskill, M. K. Gish, F. Ruddy; D. W. Carmichael skip, P. H. Fleming, M. N. Jones, A. E. Edlund; H. McCaskill skip, R. McCaskill, F. Heywood, J. Aldred; C. H. McMillan skip, E. Meyers, S. Reid, F. Collins; J. L. McRory skip, F. Patchell, L. Becker, B. Methelal.

Vice President's Win Supper

With the losers paying for an oyster supper and a number of "Scots" in the game, the President vs Vice President competition provided several thrills and proved to be a real season opener. The Vice's won by a margin of nine points after some real battles in which two of the games resulted in draws, and two others ended with a difference of only one point. Most of the boys were in mid season form and some real shots were made.

For so early in the season the games drew quite a gallery which augurs well for a successful season. The following is the result by games.

President	Vice-President
G. Purvis 11	D. Cameron 11
R. M. Williams 11	C. McMillan 10
D. Carmichael 8	W. Stralo 8
D. Ontkes 5	C. Purvis 9
W. Russell 10	H. McCaskill 9
L. McRory 3	C. Becker 10
Total 48	57

Two rinks journeyed to Carstairs on Saturday for some friendly games and report an enjoyable evening. The Purvis rink winning one game while the Carmichael rink had to be satisfied with the short end of both their games.

Obituary

John Evans

St. Catharines, Ontario, Nov. 18
John Evans, 61, Treasurer of the BARNESDALE Wine Manufacturing Company and prominent citizen died here today. Mrs. G. A. C. Dugan of Airdrie, Alta., is a sister.

C. J. Foat

Mr. C. J. Foat, an old time resident of the Cremona District, passed away at his home last Monday. Mr. Foat, who was 79 years of age, has been in ill health for some time. Two daughters, Mrs. E. J. Reid and Mrs. R. Huber, reside in Cremona district while Mr. M. N. Jones of Crossfield is a grandson.

W. B. Boucock

William Bertram Boucock of Carstairs, age 47 years, died in a Calgary Hospital on Sunday morning from tumor of the brain.

Interment took place on Wednesday afternoon, in Carstairs cemetery with Rev. C. E. Rogers officiating. Bert, as he was generally known, was a well known Rodeo and Stampede figure; being manager for several years of the Carstairs Stampede and for years has been a regular entry in the Calgary Stampede, with his chuck wagon outfit.
